National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
SOIL				
Soil Erosion - Sheet and Rill	Detachment and transport of soil particles caused by rainfall splash and runoff degrade soil quality.	Sheet and rill erosion does not exceed the Soil Loss Tolerance "T".	Sheet and rill erosion does not exceed the Soil Loss Tolerance "T" according to the current sheet and rill erosion assessment tool found in FOTG Section I.	• Visual assessment (pedestals, rills) • Erosion-bridge method; erosion meters • Special inventory methods (e.g., Rangeland Health Evaluation Worksheet) • RUSLE2
Soil Erosion - Wind	Detachment and transport of soil particles caused by wind degrade soil quality and/or damage plants.	Wind erosion does not exceed the Soil Loss Tolerance "T" or, for plant damage, does not exceed Crop Damage Tolerances.	Wind erosion does not exceed the Soil Loss Tolerance "T" or, for plant damage, does not exceed Crop Damage Tolerances, according to the current wind erosion assessment tool found in FOTG Section I.	• Visual assessment (pedestals, blow-out areas) • Special inventory methods (e.g., Rangeland Health Evaluation Worksheet) • Erosion prediction tool, i.e., Wind Erosion Equation (WEQ)
Soil Erosion - Ephemeral Gully	Small channels caused by surface water runoff degrade soil quality and tend to increase in size. On cropland, they can be obscured by heavy tillage.	Surface water runoff is controlled sufficiently to stabilize the small channels and prevent reoccurrence of new channels.	SAME AS NATIONAL	• Visual assessment • Volume calculation • Gully Erosion Equation

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
SOIL				
Soil Erosion - Classic Gully	Deep, permanent channels caused by the convergence of surface runoff degrade soil quality. They enlarge progressively by headcutting and lateral widening.	Surface water runoff is controlled sufficiently to stop progression of headcutting and widening.	SAME AS NATIONAL	• Visual assessment • Volume calculation • Aerial photo trend analysis • Gully Erosion Equation
Soil Erosion - Streambank	Accelerated loss of streambank soils restricts land and water use and management.	Accelerated streambank soil loss does not exceed a level commensurate with upstream land use and normal geomorphological processes on site.	SAME AS NATIONAL	• Visual assessment, e.g., Stream Visual Assessment Protocol, Proper Functioning Condition (PFC) • Aerial photo trend analysis • Channel Erosion Equation • Engineering Field Handbook, Chapter 16
Soil Erosion - Shoreline	Soil is eroded along shorelines by wind and wave action, causing physical damage to vegetation, limiting land use, or creating a safety hazard.	Shoreline erosion is stabilized to a level that does not restrict the use or management of adjacent land, water or structures.	SAME AS NATIONAL	• Visual assessment • Aerial photo trend analysis • Volume calculation • Erosion transects/pins
Soil Erosion – Irrigation-induced	Improper irrigation water application and equipment operation are causing soil erosion that degrades soil quality.	Irrigation-induced erosion does not exceed the Soil Loss Tolerance “T”.	SAME AS NATIONAL	• SRFR (Surface Irrigation Model) • CPED (Center Pivot Evaluation and Design) • NRCS National and State Irrigation Guides • “Irrigation Water Management to Protect Ag Resources” conservation sheet
Soil Erosion - Mass Movement	Soil slippage, landslides, or slope failure, normally on hillsides, result in large volumes of soil movement	Shallow slumps, slides, or slips are prevented or minimized so that the mass movement of soil material does not exceed naturally occurring rates.	SAME AS NATIONAL	• Visual assessment • Aerial photo trend analysis • Volume calculation

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
SOIL				
Soil Erosion – Road, road sides and Construction Sites	Soil loss occurs on areas left unprotected during or after road building and/or construction activities.	Sites are adequately protected from soil loss during and after road building and construction activities.	SAME AS NATIONAL	• Visual assessment • Volume Calculation • Water and wind erosion prediction tools (RUSLE2 and WEQ)
Soil Condition - Organic Matter Depletion	Soil organic matter has or will diminish to a level that degrades soil quality.	Soil Conditioning Index is positive.	Soil Conditioning Index is positive when organic matter levels are identified as a customer objective.	• Soil Conditioning Index • Soil Quality Kit • Soil testing and analysis
Soil Condition - Compaction	Compressed soil particles and aggregates caused by mechanical compaction adversely affect plant-soil-moisture relationships.	Mechanically compacted soils are renovated sufficiently to restore plant root growth and/or water movement.	Mechanically compacted soils are renovated sufficiently to restore plant root growth and/or water movement where these are identified as a customer objective.	• Assessment of plant root systems • Bulk density test-Soil Quality Kit • Dial penetrometer • Visual observation based on “Soil Compaction Symptoms, Causes, Correction, Prevention” Conservation Sheet • NRCS National Forestry Manual/Handbook
Soil Condition - Subsidence	Loss of volume and depth of organic soils due to oxidation caused by above normal microbial activity resulting from excessive drainage or extended drought.	The timing and regime of soil moisture is managed to attain acceptable subsidence rates.	The timing and regime of soil moisture is managed to attain acceptable subsidence rates on muck soils.	• Visual assessment • Inventory of volume and depth • Soil probes and witness poles
Soil Condition - Contaminants - Salts and Other Chemicals	Inorganic chemical elements and compounds such as salts, selenium, boron, and heavy metals restrict the desired use of the soil or exceed the soil buffering capacity	Salinity levels cause less than a 10% decrease in plant yield. Other contaminants do not exceed plant tolerances or are below toxic levels for plants or animals.	SAME AS NATIONAL	• Soil test • Soil Quality Kit- EC meter • Farm*A*Syst assessment

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
SOIL				
Soil Condition - Contaminants - Animal Waste and Other Organics	Nutrient levels from applied animal waste and other organics restrict desired use of the land.	Nutrient application levels do not exceed soil storage/plant uptake capacities based on soil test recommendations and risk analysis results.	SAME AS NATIONAL	• Soil test • Phosphorus Index • Plant tissue test • Application records • Yield records/history • Phosphorus threshold
Soil Condition – Contaminants - Commercial Fertilizer	Over application of nutrients degrades plant health and vigor, or exceeds the soil capacity to retain nutrients.	Soil nutrient levels do not exceed crop needs based on realistic yield goals and appropriate pH levels are maintained.	SAME AS NATIONAL	• Soil Test • Phosphorus Index • Soil Quality Kit-pH meter
Soil Condition - Contaminants - Residual Pesticides	Residual pesticides in the soil have an adverse effect on non-target plants and animals.	Pesticides are applied, stored, handled, and disposed of so that residues in the soil do not adversely affect non-target plants and animals.	SAME AS NATIONAL	• Visual assessment • WIN-PST • NAPRA • Soil test • Plant and animal tissue test • Pesticide use records • Cropping history
Soil Condition - Damage from Soil Deposition	Sediment deposition damages or restricts land use/management or adversely affects ecological processes.	Sediment deposition is sufficiently reduced to maintain desired land use/management and ecological processes.	Sediment deposition is sufficiently reduced to maintain desired land use/management and ecological processes according to customer objectives.	• Visual assessment • Volume calculation • Current water and wind erosion prediction tools (RUSLE2 and WEQ) coupled with sediment delivery ratios • Plant and animal community assessment • Historical records (e.g., ditch clean outs, news articles, etc.)

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
WATER				
Water Quantity - Excessive Seepage	Subsurface water oozing to the surface restricts land use and management.	Subsurface water is managed to limit periods of saturation that are unfavorable to the present or intended land use. Management complies with wetland policies.	Subsurface water is managed to limit periods of saturation that are unfavorable to the present or intended land use, as determined by the customer's objectives. Management complies with State and Federal wetland regulations and policies.	• Visual Assessment (physical presence of water, prevalence of hydrophytic vegetation, etc.) • Client interview • Area measurements • Engineering Field Handbook, Chapter 14 • Hydrology and Hydric Soil Criterion for wetlands as found in the National Feel Security Act Manual
Water Quantity - Excessive Runoff, Flooding, or Ponding	The land becomes inundated restricting land use and management.	Excess water amounts and/or rates of flow are controlled consistent with desired present or intended land use goals and wetland policies.	SAME AS NATIONAL	• Visual assessment • Client interview • Stream Visual Assessment Protocol • National Engineering Handbook (EFH – chapter 2 and 3) • Hydrologic models, e.g. HECRAS,TR-20,TR-55 • Hydrology and Hydric Soil Criterion for wetlands as found in the National Food Security Act Manual
Water Quantity - Excessive Subsurface Water	Water saturates upper soil layers restricting land use and management.	Subsurface water is managed to limit periods of saturation compatible with the present or intended land use and wetland policies.	SAME AS NATIONAL	• Visual assessment of soil cores and coring holes • Plant quality and quantity measurements • National Engineering Handbook, Part 650 (EFH-Chapter 14)

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
WATER				
Water Quantity - Drifted Snow	Wind-blown snow deposits and accumulates around and over surface structures restricting ingress, egress and conveyance of humans and animals.	Snowdrifts are reduced or prevented to allow ingress, egress, and conveyance of humans and animals.	Snowdrifts are reduced or prevented to allow ingress, egress, and conveyance of humans and animals as determined by customer objectives.	• Visual assessment • Client interview • Depth and area measurements
Water Quantity - Inadequate Outlets	Natural or constructed outlets too small to remove excess water in a timely manner.	Outlets are designed, installed, upgraded or maintained to adequately convey water for present or intended uses.	Outlets are designed, installed, upgraded or maintained to adequately convey water for present or intended uses, as determined by customer objectives.	• Visual assessment • Client interview • National Engineering Handbook, part 650 (EFH – Chapters 2,3,7) • Hydrologic models, e.g. HECRAS, TR-20, TR-55

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
WATER				
Water Quantity - Inefficient Water Use on Irrigated Land	Limited water supplies are not optimally utilized.	Land and water management is planned and coordinated to provide optimal use of natural and applied moisture.	Land and water management is planned and coordinated to provide optimal use of natural and applied moisture as determined by customer objectives. Irrigation application rate does not exceed the adjusted application rate in inches per hour as determined using the method found in FOTG IV "Irrigation Water Management to Protect Ag. Resources" conservation sheet. Total application amounts are consistent with crop needs according to the NEH, Part 652, Irrigation Guide.	• Visual assessment • National Engineering Handbook, Part 652, Irrigation Guide • Michigan Irrigation Guide • Crop quality and quantity measurements • Farm Irrigation Rating Method (FIRM) • FOTG IV, 'Irrigation Water Management to Protect Ag. Resources" conservation sheet. • Engineering Field Handbook, Chapter 15

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
WATER				
Water Quantity - Inefficient Water Use on Non-irrigated Land	Natural moisture is not optimally utilized.	Management provides optimum use of natural moisture for the present or intended land use.	Management provides optimum use of natural moisture for the present or intended land use as determined by customer objectives	• Visual assessment • Plant or animal quality and quantity measurements • Soil survey
Water Quantity - Reduced Capacity of Conveyances by Sediment Deposition	Sediment deposits in ditches, canals, culverts, and other water conveyances reduce the desired flow capacity.	Conveyance structures are upgraded or maintained to adequately convey water for present or intended uses.	Conveyance structures are upgraded or maintained to adequately convey water for present or intended uses as determined by customer objectives.	• Visual assessment • Client interview • National Engineering Handbook, Part 650 (EFH – Chapters 2,3,70 • Hydrologic models, e.g., HECRAS, TR-20, TR-55
Water Quantity - Reduced Storage of Water Bodies by Sediment Accumulation	Sediment deposits in water bodies reduce the desired volume capacity.	Water bodies and contributing source areas are treated to allow sufficient water storage for present and intended uses.	Water bodies and contributing source areas are treated to allow sufficient water storage for present and intended uses as determined by customer objectives.	• Visual assessment • Depth and area measurements • National Engineering Handbook, Part 650 (EFH – Chapters 2,3,7,11)

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
WATER				
Water Quantity - Aquifer Overdraft	Water withdrawals exceed recharge rates.	Land and water management are coordinated to conserve aquifer water levels.	Land and water management are coordinated to conserve aquifer water levels. No complaints of neighboring wells in the same aquifer being adversely affected.	• Water level measurements • National Engineering Handbook, Part 652, Irrigation Guide • "Irrigation Water Management to Protect Ag Resources" conservation sheet
Water Quantity – Insufficient Flows in Water Courses	Water flows are not consistently available in sufficient quantities to support ecological processes and land use and management.	Authorized uses and management of water are coordinated to minimize the impacts on water course flows.	N/A	• Visual assessment • Water flow records • Gauge Station data • Consumptive use/allocation water rights • Habitat Evaluation Guides • National Biology Handbook
Water Quality - Harmful Levels of Pesticides in Groundwater	Residues resulting from the use of pest control chemicals degrade groundwater quality.	Pesticides are applied, stored, handled, disposed of, and managed so that groundwater uses are not adversely affected	Pesticides are applied, stored, handled, disposed of, and managed so that groundwater uses are not adversely affected. **Where pesticides are stored**, the movement of pesticides below the rootzone is minimized. **Pesticides are applied according to**	• WIN-PST (Windows Pesticide Screening Tool – USDA/NRCS) • NAPRA (National Agricultural Pesticide Risk Analysis – USDA/NRCS) • Vadose zone and groundwater chemical sampling and assay • Farm*A*Syst • Field*A*Syst

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
WATER				
			label AND the overall soil pesticide leaching rating is at Low or Very Low Risk to Human Health using the current version of the Soil Pesticide Screening Tool OR Where pesticides are applied and the overall soil pesticide leaching rating is at Medium to Very High Risk to Human Health using the current version of the Soil Pesticide Screening tool, then the pest management component of a conservation plan minimizes the movement of pesticides below the root zone.	
Water Quality - Excessive Nutrients and Organics in Groundwater	Pollution from natural or human induced nutrients such as N, P, S (including animal and other wastes) degrades groundwater	Nutrients and organics are stored, handled, disposed of, and applied such that groundwater uses are not adversely affected.	Nutrients and organics are stored, handled, disposed of, and applied such that	• National Engineering Handbook, Part 651, Ag. Waste Mgt. Field Handbook • Nitrate Leaching Index • MARI

Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
WATER				
			nutrients below the root zone.	
Water Quality - Excessive Salinity in Groundwater	Pollution from salts such as Ca, Mg, Na, K, HCO_3, CO_3, Cl, and SO_4 degrades groundwater quality.	Salts are stored, handled, disposed of, applied, and managed such that groundwater uses are not adversely affected.	SAME AS NATIONAL	• Vadose zone and groundwater salinity sampling (total dissolved solids [TDS] or electrical conductivity) and assay • National Engineering Handbook, Part 652, Irrigation Guide • Soil salinity sampling and assay
Water Quality - Harmful Levels of Heavy Metals in Groundwater	Natural or human induced metal pollutants present in toxic amounts degrade groundwater quality.	Materials containing heavy metals are stored, handled, disposed of, applied, and managed such that groundwater uses are not adversely affected.	SAME AS NATIONAL	• Vadose zone and groundwater chemical sampling and assay
Water Quality - Harmful Levels of Pathogens in Groundwater	Kinds and numbers of viruses, protozoa, and bacteria are present at a level that degrades groundwater quality.	Materials that harbor pathogens are stored, handled, disposed of, applied, and managed such that groundwater uses are not adversely affected.	Materials that harbor pathogens are stored, handled, disposed of, applied, and managed such that groundwater uses are not adversely affected. All direct conduits to groundwater are eliminated or pathogen movement to the conduit is minimized.	• Vadose zone and groundwater chemical sampling and assay
Water Quality - Harmful Levels of Petroleum in Groundwater	Fuel, oil, gasoline and other hydrocarbons present in toxic amounts degrade groundwater quality.	Petroleum products are used, stored, handled, disposed of, and managed such that groundwater uses are not adversely affected.	SAME AS NATIONAL	• Vadose zone and groundwater chemical sampling and assay • Farm*A*Syst

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
WATER				
Water Quality - Harmful Levels of Pesticides in Surface Water	Pest control chemicals present in toxic amounts degrade surface water quality.	Pesticides are applied, stored, handled, disposed of, and managed such that surface water uses are not adversely affected	Pesticides are applied, stored, handled, disposed of, and managed such that surface water uses are not adversely affected Where pesticides are stored, the movement of pesticides to surface water is eliminated. Pesticides are applied according to the label AND the overall soil-pesticide risk rating for runoff (sediment-bound and in solution) is Low or Very Low to Human Health and Aquatic Life, using the current version of the Soil-Pesticide Screening Tool. OR Where pesticides are applied and the overall soil-pesticide risk rating for runoff	• WIN-PST (Windows Pesticide Screening Tool – USDA/NRCS) • NAPRA (National Agricultural Pesticide Risk Analysis – USDA/NRCS) • Surface water chemical sampling assay • Farm*A*Syst • Field*A*Syst • Water Quality Indicators Guide

National and State Resource Concerns and Quality Criteria

WATER				
			nutrients transported offsite is minimized. Manure is applied in a manner that will not result in ponding or runoff to adjacent property, drainage ditches or surface water. An accepted assessment tool is used to evaluate the effects of nutrient application on surface water. Where the assessment tool shows an adverse impact, an approved Nutrient Management Plan (590) minimizes the movement of nutrients transported by water.	

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
WATER				
Water Quality - Excessive Suspended Sediment and Turbidity in Surface Water	Pollution from mineral or organic particles degrades surface water quality.	Movement of mineral and organic particles is managed such that surface water uses are not adversely affected.	Movement of mineral and organic particles is managed such that surface water uses are not adversely affected. The treated area does not contribute sediment at a level that adversely affects the intended use of the surface water.	• Visual assessment • Client interview • SVAP (Stream Visual Assessment Protocol – USDA/NRCS) • Water Quality Indicators Guide – Surface Waters, Field Sheets lA and 1B (Terrene Institute ©1996) • Surface water chemical/particle sampling and assay
Water Quality - Excessive Salinity in Surface Water	Pollution from salts such as Ca, Mg, Na, K, HCO_3, HCO_3, CO_3, Cl, and SO_4 degrades surface water quality.	Salts are stored, handled, disposed of, applied, and managed such that surface water uses are not adversely affected.	SAME AS NATIONAL	• SVAP (Stream Visual Assessment Protocol – USDA/NRCS) – Salinity • Water Quality Indicators Guide
Water Quality - Harmful Levels of Heavy Metals in Surface Water	Natural or human induced metal pollutants are present in toxic amounts that degrade surface water quality.	Materials containing heavy metals are stored, handled, disposed of, applied, and managed such that surface water uses are not adversely affected.	SAME AS NATIONAL	• Surface water chemical sampling and assay
Water Quality - Harmful Temperatures of Surface Water	Undesired thermal conditions degrade surface water quality.	Use and management of land and water are coordinated to minimize impacts on surface water temperatures.	Use and management of land and water are coordinated to minimize impacts on surface water temperatures, as determined by customer objectives.	• SVAP (Stream Visual Assessment Protocol – USDA/NRCS) – canopy cover • HSI model for target species (Habitat Suitability Index – USF&WS) • Surface water temperature sampling and assay

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
WATER				
Water Quality - Harmful Levels of Pathogens in Surface Water	Kinds and numbers of viruses, protozoa, and bacteria are present at a level that degrades surface water quality.	Materials that harbor pathogens are stored, handled, disposed of, applied, and managed such that surface water uses are not adversely affected.	Materials that harbor pathogens are stored, handled, disposed of, applied, and managed such that surface water uses are not adversely affected. Collection, storage and transfer of manure, silage and wastewaters does not result in offsite movement. Manure is applied in a manner that will not result in ponding or runoff to adjacent property, drainage ditches or surface water.	• Surface water pathogen sampling and assay
Water Quality - Harmful Levels of Petroleum in Surface Water	Fuel, oil, gasoline and other hydrocarbons present in toxic amounts degrade surface water quality.	Petroleum products are used, stored, handled, and disposed of such that groundwater uses are not adversely affected.	SAME AS NATIONAL	• Surface water chemical sampling and assay

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
AIR				
Air Quality - Particulate matter less than 10 micrometers in diameter (PM 10)	Particulate matter less than 10 micrometers in diameter are suspended in the air causing potential health hazards to humans and animals.	Land use and management operations comply with PM 10 requirements of the State or Federal Implementation Plan and all applicable Federal, Tribal, State, and Local regulations	Land use and management operations comply with PM 10 requirements of the State or Federal Implementation Plan and all applicable Federal, Tribal, State, and Local regulations when Visible emissions (fugitive dust) cause human and animal health concern.	• Specific guidelines contained in State or Federal Implementation Plan; or other approved NRCS tool. • Air quality analysis • Visual assessment
Air Quality - Particulate matter less than 2.5 micrometers in diameter (PM 2.5)	Particulate matter less than 2.5 micrometers in diameter are suspended in the air causing potential health hazards to humans and animals.	Land use and management operations comply with PM 2.5 requirements of the State or Federal Implementation Plan and all applicable Federal, Tribal, State, and Local regulations.	Land use and management operations comply with PM 2.5 requirements of the State or Federal Implementation Plan and all applicable Federal, Tribal, State, and Local regulations when Visible Emissions (fugitive dust) cause human and animal health concern.	• Specific guidelines contained in State or Federal Implementation Plan; or other approved NRCS tools • Visual assessment

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
AIR				
Air Quality - Excessive Ozone	High concentrations of ozone (O_3) are adversely affecting human health, reducing plant yields, and leading to the creation of smog.	Land use and management operations comply with requirements of the State or Federal Implementation Plan and all applicable Federal, Tribal, State, and Local regulations.	N/A	• Specific guidelines contained in State or Federal Implementation Plan; or other approved NRCS tools
Air Quality - Excessive Greenhouse Gas – CO_2 (carbon dioxide)	Increased CO_2 concentrations are adversely affecting ecosystem processes.	Land use and management operations comply with requirements of the State or Federal Implementation Plan and all applicable Federal, Tribal, State, and Local regulations.	SAME AS NATIONAL	• Model simulations (Century, EPIC, CQUESTER); sampling for soil carbon or International Panel on Climate Change methodology; or other NRCS approved tools
Air Quality - Excessive Greenhouse Gas – N_2O (nitrous oxide)	Increased N_2O concentrations are adversely affecting ecosystem processes.	Land use and management operations comply with requirements of the State or Federal Implementation Plan and all applicable Federal, Tribal, State, and Local regulations.	SAME AS NATIONAL	• Model simulations (NLEAP or DayCENT), or IPCC methodology; or other NRCS approved tools
Air Quality - Excessive Greenhouse Gas – CH4 (methane)	Increased CH4 concentrations are adversely affecting ecosystem processes. .	Land use and management operations comply with requirements of the State or Federal Implementation Plan and all applicable Federal, Tribal, State, and Local regulations.	SAME AS NATIONAL	• IPCC methodology; or other NRCS approved tools
Air Quality - Ammonia (NH3)	Animal waste and inorganic commercial fertilizers emit ammonia that contributes to odor, is a PM2.5 precursor, and contributes to acid rain.	Land use and management operations comply with requirements of all applicable Federal, Tribal, State, and Local regulations.	SAME AS NATIONAL	• Approved NRCS technical guidance and tools

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
AIR				
Air Quality - Chemical Drift	Materials applied for pest control drift downwind and contaminate/injure non-targeted fields, crops, soils, water, animals and humans.	Land use and management operations comply with all applicable Federal, Tribal, State, and Local regulations, and applicable label directions.	Land use and management operations comply with all applicable Federal, Tribal, State, and Local regulations, and applicable label directions. Pesticide chemical application is consistent with Drift Management Plan	• Approved NRCS technical guidance and tools • Visual observation • Drift Management Plan • Field*A*Syst

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
AIR				
Air Quality - Objectionable Odors	Land use and management operations produce offensive smells.	Odor-producing facilities and activities are planned and sited to mitigate potential nuisance impacts and meets all applicable Tribal, State, and Local regulations.	For new situations, odor-producing facilities and activities are planned and sited to mitigate potential nuisance impacts and meet all applicable Tribal, State, and Local regulations. In situations where Michigan Department of Agriculture has a documented letter verifying an odor problem, verified complaints have been resolved to Michigan Department of Agriculture standards.	• Olfactory assessment • Agricultural Waste Management Field Handbook (AWMFH) • NRCS approved tools • Michigan Complaint Response Program verified odor complaint • MDEQ Nuisance Rule (901)
Air Quality - Reduced Visibility	Sight distance is impaired due to airborne particles causing unsafe conditions and impeded viewing of natural vistas especially in Class I viewing areas (primarily national parks and monuments).	Land use and management operations comply with all applicable Federal, Tribal, State, and Local regulations including state and local smoke and/or burn management plans.	N/A	• Visual assessment • Regional air partnership recommendations and/or state guidance for smoke management

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
AIR				
Air Quality - Undesirable Air Movement	Wind velocities (too little or too much) reduce animal or plant productivity, impact human comfort and increase energy consumption.	Devices and practices are sited and planned to mitigate excess or deficient air movement.	Devices and practices are sited and planned to mitigate excess or deficient air movement as determined by customer objectives.	• Visual assessment • Anemometers • Approved NRCS technical guidance and tools
Air Quality - Adverse Air Temperature	Air temperatures (too cold or too hot) reduce animal or plant productivity, impact human comfort and increase energy consumption.	Devices and practices are planned and sited to mitigate temperature extremes.	Devices and practices are planned and sited to mitigate temperature extremes as determined by customer objectives.	• Chill factor indices; heat indices • Air temperature assessment

National and State Resource Concerns and Quality Criteria				
Natural Resource Concern	**Description of Concern**	**National Quality Criteria**	**State Quality Criteria**	**Assessment Tools for Quality Criteria Evaluation**
PLANTS				
Plants not adapted or suited	Plants are not adapted and/or suited to site conditions or client objectives.	Selected plants are adapted to the soil and climatic conditions or the site is modified to make it suitable for the desired plants. Plants are sustainable, do not negatively impact other resources, and meet client objectives. For specific land uses, additional criteria apply: ***Cropland:*** A healthy stand with vigorous growth. Yields 75% of client expectations. **Rangeland:** Plants on or planned for the site are listed in applicable Ecological Site Descriptions (ESD) ***Pastureland:*** Plants on or planned for the site have a site adaptation score greater than 3 using Pasture Condition Scoring (PCS)and are listed in applicable Forage Suitability Groups (FSG)reports. ***Hayland:*** Plants on or planned for the site are listed in applicable Forage Suitability Groups (FSG)reports. ***Forestland/Agroforest:*** Plants on or planned for the site are listed in Ecological Site Descriptions (ESD)	Selected plants are adapted to the soil and climatic conditions or the site is modified to make it suitable for the desired plants. Plants are sustainable, do not negatively impact other resources, and meet client objectives. For specific land uses, additional criteria apply: ***Cropland:*** A healthy stand with vigorous growth. Plants produce a realistic yield goal that is achievable 50% of the time. **Rangeland:** N/A ***Pastureland:*** Plants on or planned for the site have a site adaptation score greater than 3 using Pasture Condition Scoring (PCS)and are listed in applicable Forage Suitability Groups (FSG)reports, or	• On-site investigation and records • Forage Suitability Groups (FSG) • Pasture Condition Scoring (PCS) • Client interview • PLANTS database • VEGSPEC • Seeding and Planting Guide • Plant hardiness zone map • Soil pH, drainage class, sodium adsorption ratio (SAR) and electrical conductivity (EC) suitability ranges. • Soil interpretations – Section II • Local agronomy guides • University Extension Service information • Soil survey manuscripts • Ecological Site Descriptions (ESD) • Conservation Tree and Shrub Groups (CTSG) • Silvics of North America Trees • NRCS Forestry Manual/Handbook • Invasive Plants Council List of Invasive Species • NRCS Discipline Manuals/handbooks
